However, some figures and Supplemental Material published in *EHP* articles may not conform to 508 standards due to the complexity of the information being presented. If you need assistance accessing journal content, please contact [ehp508@niehs.nih.gov](mailto:ehp508@niehs.nih.gov). Our staff will work with you to assess and meet your accessibility needs within 3 working days.

## **Supplemental Material**

### **Long-Term Trends Worldwide in Ambient NO<sub>2</sub> Concentrations Inferred from Satellite Observations**

Jeffrey A. Geddes, Randall V. Martin, Brian L. Boys, and Aaron van Donkelaar

#### **Table of Contents**

**Figure S1:** Evaluation over North America of the global approach to combine multiple satellite instruments. (a) Unaltered GOME-derived ground-level NO<sub>2</sub> observations from 1999 and (b) downscaled GOME observation based on relative spatial structure observed with SCIAMACHY from 2003-2005. (c) Mean SCIAMACHY-derived ground-level NO<sub>2</sub> from 2003-2005, and (d) from 2009-2011. (e) SCIAMACHY observations from 2009-2011 smoothed to represent GOME horizontal resolution, and (f) downscaled SCIAMACHY observations for the same time period using the SCIAMACHY-derived ratio of high resolution to coarse resolution during 2003-2005. Agreement between (d) and (f) is high ( $r = 0.96$ ).
